Tobin SuperBase® Lots and Tracts

Do you drill in the Western US and have difficulty mapping your leasehold due to insufficient detail boundary information?

With Tobin SuperBase® Lots and Tracts digital data, we will help you better locate and map your land position. Combining its 80-plus years of industry mapping expertise with its unsurpassed quality products, Tobin delivers an accurate, robust quarter-quarter and lots and tracts data set. Tobin SuperBase® Lots and Tracts Data is the first comprehensive set of digital aliquot survey data designed to fit Tobin SuperBase® Landgrid and Survey Data. Tobin SuperBase® Lots and Tracts Data has been referenced to the industry standard SuperBase® Landgrid and Survey layer in order to allow programmatic mapping and analysis of leasehold, well locations, and geologic trends.

Tobin applied the BLM's rules for creating standard aliquot parts and standard lots down to the quarter-quarter level, while using Tobin's SuperBase® Landgrid and Survey as a source layer. This product was then edited by using BLM's GCDB and other sources to add in non-standard lots and tracts. USGS quadrangle maps, BLM plat maps and field notes are examples of resources that Tobin has used to validate its SuperBase® Landgrid and Survey. The result of bringing together these various resources is to give the customer the benefit of Tobin's superior survey positional accuracy, but with attributes and polygonal features at a subsection level.

A customer using the SuperBase® Lots & Tracts layer can have confidence that they are using a product that has the same superior positional accuracy as, and that will align with, other Tobin products such as survey, wells, leases and ownership. Mapping and projects can now reference all the layers necessary for defining a leasehold or project proposal and be assured that they will make sense when plotted together.

Features:

- Digital product represents BLM standard aliquot assignment of quarter-quarters and lots and tracts
- Edge matched within the data set to Tobin SuperBase® Landgrid and Survey Data
- Provides additional detail to industry standard Tobin SuperBase® Landgrid and Survey Data
- Data Set includes polygons, attributes and annotations for meridians, township, range and sections

Benefits:

- Allows for accurate mapping of corporate leasehold resulting in better net acreage reporting.
- Since the data is digital and includes a database of attributed data it can be formatted for users of GIS, mapping and/or CAD applications
- Data is updated quarterly
